The accompaniment and support during difficult change processes and management situations has developed from practice, as a particular field of competence. Thus, my team and I support people within the organisation during the development and implementation of new approaches and the solution of problems, on site and on all hierarchy levels.

For me, this collaboration means working actively to develop the necessary team motivation and to positively influence it. Good leadership is essential for success during change processes. Therefore, I particularly concentrate on supporting managers at the head of the organisation, as well as their management teams.
